

Anthony Peterson

I did the ADD, SUBTRACT, MULTIPLY, DIVIDE functions. I also designed the overflow handling function, as well as the code that identifies the sign, operand, and operator of the user input.

Erik set up an early prototype for the group to get started with and designed the GUI (including the memory dump). Erik and I worked together on the Use Case Diagram. Erik also wrote the document comparing the waterfall method and the scrum method.

Daniel did the BRANCH, BRANCHNEG, BRANCHZERO, HALT functions. He also kept track of the meeting logs, managed our Github, and cleaned up our code.

Santiago did the READ, WRITE, LOAD, STORE functions, as well as designed the 10 test cases.
